

Requirements Vetting & Rapid Delivery

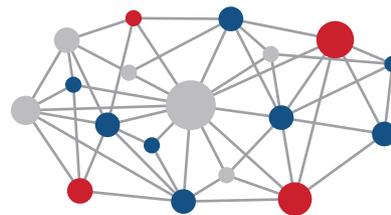

Coordinates thousands of user capability gaps annually and utilizes user-based prioritization to focus on the most urgent operational needs. Attacks those needs with interagency and international partners to eliminate duplication of effort. CTTSO then joins forces with its partners to solve remaining needs and deliver solutions back to the users as rapidly as possible.

Prototypes are field tested and delivered to the end user before the traditional acquisition process is fully engaged. Typically 18-24 months from the time the operational requirement is received; 6-12 month delivery on the short side.

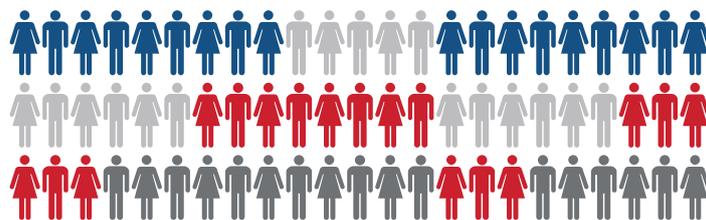

Over 100 Government Agencies

Formal communication links to the services and combatant commands; the interagency community; federal, state, and local first responders; and international partners. Anyone with a combating terrorism need is welcome to the table.

Combined Expertise

Leverages combined expertise and experience from government, commercial, private, and academic sources throughout the United States and the world. This brings a level of unparalleled technical knowledge toward every aspect of the organization.

International Partners

Shared Resources

50/50 ratio of resources contribution for common requirements.

Enables collaboration on scores of development efforts, results in millions of dollars in research and development and information sharing cost avoidance, and provides benefits for the entire combating terrorism community.

5 International Partners

Efficiencies

By focusing on commonalities between the needs of armed forces; federal, state, and local agencies; and international partners, we can attack needs where they intersect, thus developing a solution once rather than having each agency pay to solve the problem alone.

Financial Leveraging

In addition to hundreds of millions of dollars in non-financial benefits from cooperation and collaboration, CTTSO has received a financial return on investment of 170% since September 11, 2001.
